

PANEL

DISCUSSION

Format

1: Question from the Moderator

2: Answers from the Panel

3: Follow-up from the Panel/Audience

4: Move to the Next Question

**Q1 (Both: Academia and Industry):
Why Lean, Isabelle, Rocq, etc.
...in the age of AI?**

Q2 (Both):

**Do we need fundamentally
different techniques for ML-
based mathematical proving
than for verification?**

Q3 (Academia):

**What should and can we do
about current AI research
severely lacking
reproducibility?**

Q4 (Academia):

AI is eliminating many entry-level CS jobs.

What should we teach / learn now?

Q5 (Industry):

**What skill sets do you expect
from new hires?**

Q6 (Industry):

**Do PhD degrees still matter
for hiring?**

Q7 (Industry):

**How do you plan to make
profit from AIPV research?**

Q8 (Academia):

The resource gap between academia and industry is becoming visible even in proof and verification. What should academia do?

Q9 (Academia):

How should we handle AI-driven growth in research output and reviewing load?

Q10 (Both):

**Should we try to gain
international experience
(studying/working abroad) in
this post-Covid era?**
